

Linwoods Dairy

Background

Linwoods has been a supplier of premium fresh milk products since 1982, and has developed and grown its milk business across the independent retail trade in Northern Ireland.

In 2004, Linwoods opened a new, state-of-the-art, modern dairy at its operational site outside Armagh, which is equipped with the latest technology and up-to-date processing methods to create the best tasting and freshest range of milk products to satisfy all tastes!

In November 2012, Linwoods launched Linwoods Super Healthy Milk, Europe's first probiotic and vitamin-enriched fresh milk.

The company is aiming to market the new milk in Britain, the Republic of Ireland and further afield. Linwoods Super Healthy Milk is a natural, fresh milk and tastes exactly like 'ordinary' milk. The addition of probiotic and vitamins supercharges the product's health-giving properties.

The milk contains probiotic, known to help support the digestive and immune systems. It is low-fat and enriched with Vitamin D, E and K2 essential for strong bones and teeth. Linwoods is also the very first dairy in Europe to fortify a milk with Vitamin K2.
